\*Since 2012, we have made available two versions of our emissions data from energy used in our data centers: contractual impact and regional impact. We emphasize contractual emissions because we believe they provide a more accurate accounting of our impact but we feel it's important to share both versions in the spirit of transparency. Guidance from the World Resources Institute recommends sharing both sets of numbers. You can learn more about their Scope 2 guidance here: [http://www.ghgprotocol.org/scope\\_2\\_guidance](http://www.ghgprotocol.org/scope_2_guidance).

<b>Annual Water Intensity</b>	0.13	0.14

\*2014 was the first year we reported water data. In this report, water use refers to potable water withdrawal — the amount of potable water that we are receiving from local utilities. Recycled water is excluded. In 2015, we used 2,700,000 gallons of recycled water. In 2015, we refined our methodology for calculating our water use, and all data presented here reflects this updated.
